

**NOVO<sup>H22</sup> GRASS**  
high technology in hybrid grass

## The highest technology in artificial turfgrass and our raygrass Elite blend make up the best HYBRID TURFGRASS

Novogress H22 is a perfect symbiosis between artificial and natural grass. It is a hybrid, reinforced grass, produced in Spain by Novogreen and especially developed for sports grounds.

It is the ideal support for natural grass, its technology guarantees the optimum union of plant fibre and artificial fibre.

The roots are able to grow and develop with a unique depth, offering a highly stable ground to the player. Thanks to its drainage and ventilation, we achieve a reinforced plant covering which is 100% healthy.

Novogress H22 is an excellent choice for sports fields, specifically football, due to it is very long-lasting and 100% recyclable.

## FEATURES

<b>Uses</b>	Football pitches or areas of frequent use in golf courses
<b>Soil</b>	Fertile soil with fine texture
<b>Stability</b>	Optimum, avoids uneven support for the players
<b>Drainage</b>	Allows drainage and roots ventilation
<b>Permeability</b>	High
<b>Resistance</b>	Three times more resistant than a non-reinforced natural turfgrass
<b>Erosion</b>	High resistance, due to the footprint of the player being less damaging
<b>Damage recovery</b>	Faster than a non-reinforced natural turfgrass
