

JAPONICA ZENITH ZOYSIA

Japonica Zenith Zoysia is of a light green colour, resistant to the shade. It requires little maintenance and hardly any chemical treatment, as well as being resistant to plagues and insects. It has few watering needs and can go without its water supply in times of drought without permanently damaging the grass. The success of this variety is tested and is a factor which thrives in areas where others cannot, mainly in shaded areas.

CHARACTERISTICS

AESTHETICS	Use	Golf , sports grounds, gardens and landscapes
	Colour	Light green
	Blade width	Fine
	Yellowing/winter discolouring	Latency from 10-12°C
FUNCTION	Soils	All kinds of soils. pH between 6.0 – 8.5
	Growth/reproduction	By stolons and rhizomes, slow growth.
	Erosion	Medium – low resistance
	Damage recovery	Low resistance to treading
	Plagues	High resistance
	Diseases	High resistance, but once damaged it has a slow recovery
CLIMATE	Heat	High resistance
	Cold	Medium – low resistance
	Shade	Very good adaptation
	Drought	High resistance
	Salinity	Medium resistance
	Watering needs	Low. Very resistant to drought, tolerates long periods without watering
CARE	Mowing	Ideal height between 20-25 mm
	Weed control	Very good
	Fertilizers	Low
